

Residential Engineering

Residential engineering requires broad skillsets and knowledge, whether the client prefers timber or steel frames. Comprehensive design stage is also necessary as it guarantees that the clients' needs are addressed correctly to develop structural solutions, whilst delivering the most economical structural design for your residential project.

Rise Consulting Engineers possess extensive experience & expertise in residential engineering, whether a luxury multi storey resident or additions & alterations to an existing property. We take importance in integrating green strategies and sustainability goals, as well as troubleshoot challenging construction constraints. Clients can trust on **RCE's** well established design method and process including on-site inspections, defined quality management, knowledge of various systems to match client's objectives and prompt response & feedback to the client's queries.

Whether the client is looking for developing a new project or requires professional advices with the extension/alternation of existing structures, **RCE** are confident in providing optimised structural engineering services.
