

Structural Inspections and Reports/Certification

Whether residential or commercial project, all of the major structural elements of the building must be designed, inspected and certified by a structural engineer. This includes roof, wall/column and floor systems, concrete elements, decks & retaining walls to name a few. Structural inspections can assist with earlier prevention of structural failure and is less costly than repairs & maintenance.

At **Rise Consulting Engineers**, we are ready to arrange inspections accompanied by our qualified engineers at a convenient time to our clients. **RCE** offers comprehensive structural inspection and reports. Our structural report includes;

- Critical stage inspection during construction
- Strata complex structural defect inspection/report
- Diagnostic structural inspections
- Structural repair specifications
- Pre-purchase structural inspections
- Dilapidation inspections and report
- Structural adequacy inspections

RCE are open to discussions, to provide our clients with a clear understanding of the structural inspections & reports.
